Experience better hearing today

“ Even though we were using other dry aid kits, after the first night back in the Dry & Store, the next morning my 8-year-old son turned on his aids and went *“Whoa, everything is much louder and clearer! What happened?”* ~ N.B., Toronto, Ontario

I wear a cochlear implant, and I live in humid Houston, Texas. I was having to have a new microphone, which is very costly, about 3 to 4 times a year. *I have not had to buy a new microphone since I bought my Dry & Store about eighteen months ago.* ~ M.W., Houston TX

Dry & Store has totally solved my itchy ears, a plague I have suffered from for years. You can tell the world I think your product is great! ~ S.C., via email

Over a span of about five years and three different makes of hearing aids, I had one or the other pair in the shop about every two months. *After starting use of the Dry & Store, I have not had a failure in over a year.* ~ H.P., Nutley NJ

I purchased the Dry & Store system after both my aids went back to the factory for repairs related to moisture build-up. I noticed an *immediate improvement* in the condition of my aids after using the device... I feel the Dry & Store was well worth the investment and recommend it to anyone who uses hearing aids, especially if you depend on them for work. ~ T.D., Cleveland OH

What a difference a night in that unit made! ...I wish now that I would have bought this when I purchased my aid! ~ J.M., Seattle WA ”

Dry & Store®

Better hearing through Better hearing aid care.

EAR TECHNOLOGY CORPORATION
Helping people hear better, every day.™

Your local source for Dry & Store:

How are you protecting your *Investment?*

The *Moisture* Alternative

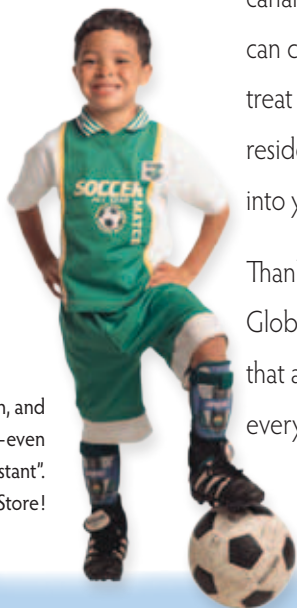

Dry & Store® redefines hearing aid care.

Dry & Store is the most effective way to care for **hearing instruments of all types**, including traditional hearing aids, cochlear implant equipment, and ear monitors.

Our Dry-Max™ technology utilizes the same principle as clothes drying on a line, gently circulating warm, dry air around your hearing instruments. Meanwhile, our specially-formulated Dry-Brik® desiccant captures the moisture. So it's gone. Completely.

The result: Most users report better sound quality and fewer repairs.

Perspiration, humidity, rain, condensation, and body oils are all enemies of hearing aids—even those that are advertised as "water resistant".
The remedy? Dry & Store!

Simple. Automatic. Safe.

Since all of its patented technologies are contained in one fully-automated unit, **Dry & Store is incredibly easy to use.** Every night before you go to bed, simply place your hearing aids in the tray (batteries and all) and press the **ON** button.

That's it! While you sleep, Dry & Store dries and conditions, then turns itself off.

When you wake up, your hearing aids are ready to go. They'll sound better – more powerful, more crisp – and they'll feel more comfortable, too.

Hearing aids harbor germs. Dry & Store kills them.*

There's something else you should know. Germs live in your ear canal, and they thrive in that warm, humid environment. They can cause odors, itching, irritation, even infections. You can treat the ear canal, but unless you kill the germs that take up residence on your hearing aids, they'll be carried right back into your ear the next day.

Thankfully, there's a germicidal lamp inside the Dry & Store Global model that **destroys 99.9% of the micro-organisms** that are most likely to cause those problems. Now you can start every day with fresh, clean hearing aids.

*Germicidal lamp available in the Global model only.
(Global II is shown at right.)

Dry & Store®

All of our electrical drying appliances are fully automatic and feature the Dry-Max™ technology that has earned Dry & Store its position as the worldwide leader in hearing instrument care. Choose the one that best meets your lifestyle.

Our flagship model, the **Global II** offers all of the benefits of Dry & Store conditioning—heat, moving air, and a germ-killing cycle. Great for both home and travel, as well as international use. Accommodates all styles of hearing aids and implant equipment.

Zephyr by Dry & Store® has the same renowned drying and deodorizing benefit as the Global, but it does not have the germicidal lamp. Even though it's a smaller package, it still packs a punch...clearly not just another box of hot air!

Both of our models utilize the same powerful desiccant – the Dry-Brik® II – to capture both moisture and odors.

Dry & Store®. Better hearing through better hearing aid care.
